

PRS — V1 Screen Architecture Report

1. V1 Screen Inventory

Twelve screens, grouped by access level. No V2 functionality added.

#	Screen	Access	Notes
1	Welcome / Landing	Public	
2	How PRS Works	Public	Methodology — six variables, four bands, worked example.
3	Auth Entry	Public	Email field. Unified sign-in/sign-up.
4	Check Your Email	Public	Confirmation + resend with 30s cooldown.
5	Auth Verify Error	Public	Token expired / consumed / invalid. Success is a silent redirect.
6	My Plants	Auth	Authenticated home. Empty + populated are the same route.
7	Plant Picker	Auth	Catalogue grid (~30 plants). No search at this scale.
8	Environment Form	Auth	All inputs + conditional AC setpoint.
9	Plant Detail	Auth	Live PRS + breakdown + advice + watering. Same screen first-view and revisit.
10	Edit Plant	Auth	Re-uses Environment Form, pre-filled.
11	Settings	Auth	Email, display name, sign out, delete account, link to deleted plants.
12	Deleted Plants	Auth	Soft-deleted rows in 30-day window. Restore action.

First-time-user-only screens: none as standalone. Empty state of My Plants serves the FTU function. Dedicated tutorial = friction we don't need.

Sub-states (not screens): Delete Plant confirmation (with undo toast), Delete Account confirmation (typed-name destructive).

3. User Journey

First-time visitor

Welcome → [How PRS Works] → Auth Entry → Check Email → (open email) → Magic Link Verify → My Plants (empty) → Plant Picker → Environment Form → Plant Detail → My Plants (populated)

Returning user (session valid)

Any URL → My Plants → [tap plant → Plant Detail → Edit Plant → Plant Detail] | [Add another → Plant Picker → Environment Form → Plant Detail] | [Settings → sign out / delete account / Deleted Plants]

Session expired

Any authenticated URL → Auth Entry → re-enter flow

Recovery

Settings → Deleted Plants → Restore → `user_plants.deleted_at = NULL` → My Plants

Error paths

Auth verify (invalid/expired/consumed token) → Auth Verify Error → Auth Entry Plant Detail (Open-Meteo down) → input snapshot + suppressed score + retry

4. Screen Specifications

#	Screen	Purpose	Primary action	Data displayed	Schema fields	Future API
1	Welcome	Explain PRS in <30s; convert to email entry.	Tap "Get started".	Static copy + one worked example.	None.	None.
2	How PRS Works	Methodology surface for curious visitors.	Read; CTA to Auth Entry.	Six variables, four bands, Pothos example, weights disclaimer.	None.	None.
3	Auth Entry	Capture email, issue magic link.	Submit email.	Single email field.	users.email (upsert), login_tokens (insert).	POST /auth/request-link
4	Check Your Email	Confirm link sent; allow resend.	Wait or resend after 30s.	Email address sent to, resend button, spam tip.	login_tokens (insert on resend).	POST /auth/request-link
5	Auth Verify Error	Recover from invalid/expired/consumed tokens.	Tap "Send a new link".	One of 3 error variants + CTA.	login_tokens (read; check consumed_at, expires_at).	POST /auth/verify (rendered on failure)
6	My Plants	Authenticated home; list active plants with live PRS.	Tap plant → Detail Add plant → Picker.	Per-card: line 1 = nickname (or "{common_name} (n)" ordinal fallback); line 2 = species common name (always shown); line 3 = city, only when user has plants across multiple cities. Current PRS + band + dominant negative variable.	user_plants (read where deleted_at IS NULL), plants (join).	GET /user-plants
7	Plant Picker	Browse catalogue, pick species. Surface ownership signal.	Tap card → Environment Form.	Grid of ~30 cards: image, name, light tag, blurb. Badge "You own N" on species the user already has.	plants (read all), user_plants (count by plant_id for current user).	GET /plants, GET /user-plants/counts
8	Environment Form	Collect all inputs needed for PRS. Handle duplicate species + multi-city users gracefully.	Fill + submit.	Species pinned. Nickname: "optional" if first of species, "recommended" with placeholder (e.g., "Kitchen Snake Plant") if duplicate —	user_plants (insert — all env + indoor fields), user_plants (count by plant_id to drive nickname hint), user_plants (read	POST /user-plants, GET /user-plants/counts

#	Screen	Purpose	Primary action	Data displayed	Schema fields	Future API
				never blocking. city + country_code pre-filled from user's most recent plant, editable. location_type, floor, sunlight, CV, AC (conditional setpoint), humidifier.	most recent for city pre-fill).	
9	Plant Detail	Live PRS + breakdown + advice + watering. Used for first-view AND revisit.	Read score; Edit / Delete / How calculated?	Header: H1 = nickname (or species fallback + "Add a nickname" affordance); H2 = species common name (always shown). PRS, band, six sub- scores, dominant variable, advice template, watering interval, "reflects today" caption.	user_plants (read), plants (read), advice_templates (locked lookup).	GET /user-plants/:id (computes PRS, calls Open-Meteo)
10	Edit Plant	Update any field; trigger recompute on save.	Modify + save → Plant Detail.	Env Form structure, pre- filled. Nickname is field 1 (the disambiguator leads).	user_plants (update).	PATCH /user- plants/:id
11	Settings	Account operations.	Sign out / edit display name / delete account / go to Deleted Plants.	Email (read-only), display_name, sign out, deleted- plants link, destructive delete-account.	users (read/update display_name).	PATCH /users/me, POST /auth/signout, DELETE /account
12	Deleted Plants	Expose 30-day recovery window.	Restore.	Soft-deleted rows + days remaining + Restore action.	user_plants (read where deleted_at IS NOT NULL).	GET /user- plants?deleted=true, POST /user- plants/:id/restore
